IMPORT DATA USING TRANSFORM MAPS (SPREADSHEET)

Phase 2: Requirement Analysis

Objective: Identify the data, tables, fields and ServiceNow functions required to implement the employee spreadsheet import.

1. Data Requirements

- An external spreadsheet containing structured employee information is required.
- The employee data must contain fields that can be mapped to the ServiceNow target table.

2. Target Table Requirements

- A custom Employee Test table is required.
- Table Label: Employee Test.
- Table Name: u_employee_test.

3. Field Requirements

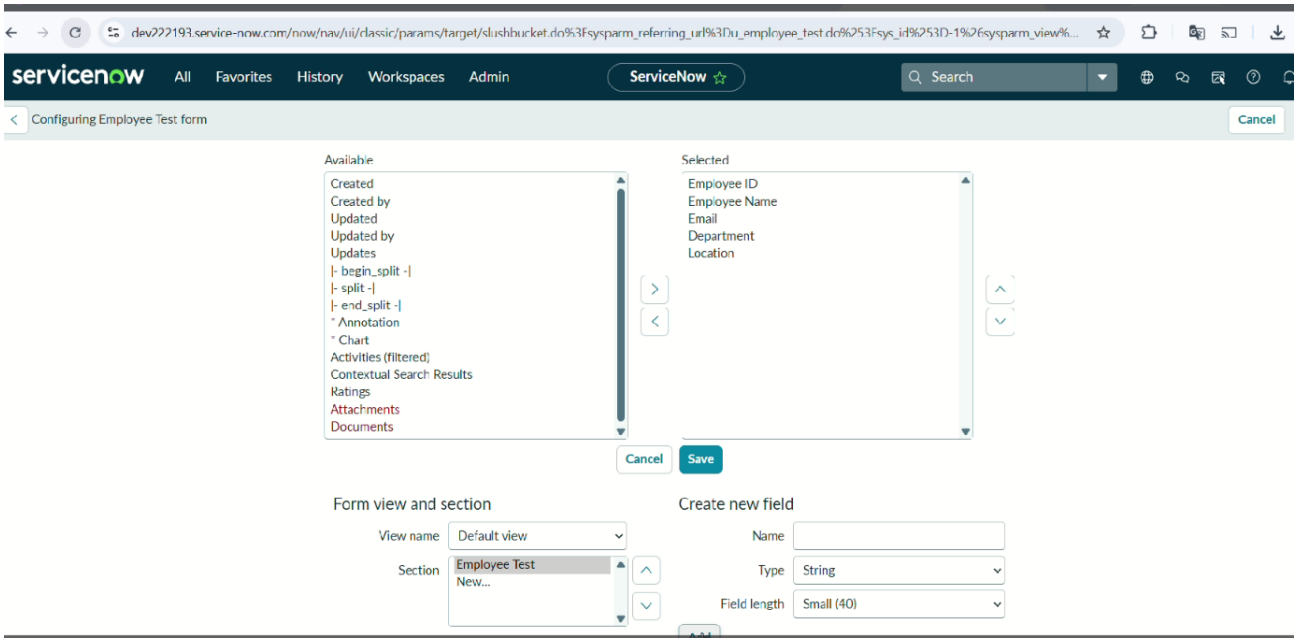

- Employee ID – String.
- Employee Name – String.
- Email – String.
- Department – String.
- Location – String.

4. Import Requirements

- An Employee Import table is required as the staging table.
- Import Set data must be loaded before transformation.
- A Transform Map named Sample Spreadsheet Import is required.
- The source table is Employee Import and the target table is Employee Test.

5. Data Integrity Requirement

- Coalesce is required to handle repeated employee imports and avoid duplicate records.
- Existing employee records should be updated when the identifying value matches.
