IMPORT DATA USING TRANSFORM MAPS (SPREADSHEET)

Phase 5: Project Development

Objective: Implement the planned employee data import solution in ServiceNow.

1. Spreadsheet Preparation

- Open a new Google Spreadsheet.
- Create the sample employee data.
- Download it as Sample Spreadsheet.xlsx.

2. Custom Table Creation

- Navigate to Tables > Create New.
- Create Employee Test with name u_employee_test.
- Add Employee ID, Employee Name, Email, Department and Location fields.

3. Import Set Table Creation

- Navigate to Load Data.
- Create the Employee Import table.
- The name u_employee_import is auto populated.
- Submit the configuration and proceed to Create Transform Map.

4. Transform Map Configuration

- Create Sample Spreadsheet Import.
- Employee Import is used as the source table.
- Employee Test is used as the target table.
- Use Auto Map Matching Fields and Mapping Assist.
- Save the field mappings.

5. Transformation

- Click Transform and execute the transformation.
- Verify the success message and check the Employee Test table for imported records.
