IMPORT DATA USING TRANSFORM MAPS (SPREADSHEET)

Phase 6: Project Testing

Objective: Verify successful data import, record creation, update handling and duplicate prevention.

1. Initial Validation

- Open the Employee Test table after transformation.
- Verify that the imported employee records are available in the target table.
- Use the personalized list columns when required to view the fields.

2. Coalesce Testing

- Open the Sample Spreadsheet Import Transform Map.
- Under Field Maps, make an appropriate field Coalesce = True.
- Save the Transform Map.

3. New Excel Data Test

- Load additional Excel data into the existing Employee Import table.
- The documented test contains four rows, including two existing employee IDs with changed values andtwo new employee IDs.

4. Transform Result Verification

- Run the Transform and check Transform History.
- The documented result shows four rows uploaded: two inserted new IDs and two updated existing IDs.
- Open Employee Test and verify the inserted and updated records.

5. Repeat Import Test

- Upload the same spreadsheet again using the same Transform Map.
- The documented result shows four ignored rows, with zero new inserts and zero updates.
